

# What does bUnit offer?

- Setup and define components under tests using C# or Razor syntax
- Verify outcomes using semantic HTML comparer
- Emulates the Blazor life cycle methods
- Interact with and inspect components as well as trigger event handlers
- Pass parameters, cascading values and inject services into components under test
- Mock Services, IJSRuntime, other components, Blazor authentication and authorization, and others

**What does bUnit offer?**

**BEST UNIT TEST PRACTICES FROM THE C#  
WORLD.**

**FEELS LIKE "A REGULAR" UNIT TEST**
