

# What does bUnit not offer?

- It is not a general purpose framework.
- It does **not** run in a browser. Does not run JavaScript.
  - But we can assert that our JavaScript functions got called.

# Why not Selenium / Playwright?

- They are slow!
- Expensive to build and maintain!
- They are not unit test frameworks. They are meant for e2e tests.

A screenshot of a test runner interface, likely Test Explorer in Visual Studio, showing a list of tests and their durations. The interface is tilted at an angle. The table has two columns: 'Test' and 'Duration'. The tests are grouped into folders, some of which are expanded. All tests show a green checkmark icon, indicating they passed.
