Counter

```
@using Bunit
@using Xunit

@inherits TestContext

@code {
    [Fact]
    public void SomeTest()
    {
     }
}
```

```
<h1>Counter</h1>
Current count: @_currentCounter
<button id="increment-button"</pre>
        class="btn btn-primary"
        @onclick="IncrementCount">Click me</button>
@code {
    private int currentCounter { get; set; }
    private void IncrementCount()
        currentCounter++;
```

We can write our unit tests as we used to (including a nice twist)

Why bUnit?
