Stub a component
Problems we want to solve

- Remove dependencies and tedious setup (e.g. remove JavaScript setup)

- Easily setup certain situations (e.g. throw exception in child component)

- We don't want to test 3rd party code

  - That is not our responsibility

  - Makes our tests fragile

  - Most important: You don't get paid for that

Stub a component
The general idea

```
<Foo>
    <Bar />
</Foo>
```
