What does bUnit offer?

- Setup and define components under tests using C# or Razor syntax

- Verify outcomes using semantic HTML comparer

- Emulates the Blazor life cycle methods

- Interact with and inspect components as well as trigger event handlers

- Pass parameters, cascading values and inject services into components under test

- Mock Services, IJSRuntime, other components, Blazor authentication and authorization, and others

What does bUnit offer?

BEST UNIT TEST PRACTICES FROM THE C# WORLD.
